

NB²-Maitake

(Maitake mushroom (*Grifola frondosa*) powder)

Description

The medical effectiveness of Maitake mushroom (*Grifola frondosa*) has been a subject of discussion for many years in the food and health-care industry. Research studies by various institutes have established the excellent effectiveness of Maitake mushroom in activating the immune system. **NB²-Maitake** production process consists of growing the Maitake mushroom in controlled culture rooms and after the appropriate cultivation period is completed, the cultured Maitake is dried, grinded and freeze dried. **NB²-Maitake** taken on a regular basis, will help your body develop natural defenses, making you less susceptible to colds and attack from viruses. Also symptoms of exhaustion and fatigue will be greatly reduced. The effectiveness of this product can be heard from the many cancer patients regularly taking the product. They say their illness has been curbed and they also notice in many instances that the secondary after effects of the anti-cancer drugs is greatly reduced. Another advantage of Maitake mushroom according to the latest research studies is its excellent ability to decompose fat. This greatly helps lower the blood sugar level and also the level of cholesterol.

Raw materials

Maitake mushroom (*Grifola frondosa*)

Amount of intake

Daily intake : 2-3g

Specification

Appearance	Light brown - light gray powder
Aroma	Mushroom aroma
Loss of drying	< 8.0%
Heavy metal	< 30ppm
Total plate count	< 5x10 ³ /g
E. coli group	negative
Ash	< 5%
Arsenic	< 2ppm

Packaging and Storage

Packing : Negotiable
Storage : Store in a cool, dry place
Best before date : 2years after production
